FELICIA STRONG-WHITAKER, INTERIM DIRECTOR

ADDENDUM NO. 2
Request for Proposal – 12RFP83223CC-MT
Automated Fuel Management System (AFMS)
Fulton County, Georgia

May 2, 2012

Dear Vendors:

This addendum is in reference to the 12RFP83223C-MT
Automated Fuel Management System

1. Section 2-5 a and b: This section makes mention of contracts beginning in 2011. Can the county please correct contract dates?
   Response: The contract will be awarded in 2012.

2. Section 3.3.1: This section states that you want an RF device or keys or cards to validate transactions. At the pre-bid the County stated that for vehicle identification you want all vendors to quote the fully automated vehicle solution that plugs into the vehicle diagnostics port where equipped to collect accurate odometer, engine hours etc.
   Response: The vendor must provide RF devices or keys.

3. For employee identification you would like the vendor to supply pricing based on employees entering a manual pin. (Would you like optional pricing for key fobs?) It is crucial that we understand the requirements of the County so that each vendor is submitting a comparable product bid and to ensure that the County receives the desired solution.
   Response: Yes

4. We understand that the County is looking to monitor fuel for 1500 vehicles. We would like to formally request that the County provide a full vehicle list to include year, make, model, if equipped with saddle tanks, and a count of any other misc. equipment that you may want to monitor.
   Response: See Attachment A

5. Please confirm that the county would like us to price for our team to train the County technicians to install the vehicle devices.
Response: Yes

6. Section 3.3.4, No. 2 states that the vendor must supply all equipment including "communications up to where it connects to Fulton County's IT infrastructure.

A) Do each of the county sites already have existing connectivity somewhere at the site to the County's network via high speed (Ethernet) connection?
Response: All the sites are currently using an analog line to dial into a modem, connecting to the network via a data cable is not recommended because of the distance of the cable runs(over 295ft), however, there is the possibility of using wireless to make a connection to the network.

B) Is the County ok with a Wi-Fi based communication solution from the FCT to an access point located onsite?
Response: See above answer. The use of Wi-Fi is to be determined.

C) If Wi-Fi connection is utilized will the County provide and install the Wi-Fi access point on/in a building near the Fuel Island?
Response: Please propose your solution. See above response.

D) If not, will the County provide a POE (Power over Ethernet) Network connection drop to a location designated by the vendor for us to use when installing our supplied Wi-Fi access point?
Response: See above response.

7. With regard to the Veeder Root TLS system components do the TLS monitors at each site currently have network cards installed and are they currently plugged into the county network?
Response: No

8. If not, will the county be supplying the network cards or should we price these into the bid?
Response: No

A) Will the county be providing/running network cabling to the Veeder Root boxes at each site?
Response: All the sites are currently using an analog line to dial into a modem, connecting to the network via a data cable is not recommended because of the distance of the cable runs(over 295ft), however, there is the possibility of using wireless to make a connection to the network.

9. Exhibit 3, No.3 mentions Data Migration from the Tech 21 system. By "Migration" does the county want the vendor to move all existing "historical" data from the Tech 21 system into the new vendor reporting system? Historically this is not an easy task as data may be corrupt, missing or non-compatible with the new vendor format. This

often caused confusion/inaccurate historical reporting in the new system. Often we find that customers will choose to just back up the old data for use later and move forward with the new system data as implemented. Please confirm that the County does want all historical data including transactions, etc. migrated from the Tech 21 system to the new product so that we can price accordingly.
Response: No, the database should be loaded with accurate data. Historical data can be stored.

10. Regarding system integration/data transfer:
A) Can the County please list details specifying each software program/platform that you would like the Fuel System to integrate with or pass data into, for example, you mention wanting data sent to the County's Fleet Maintenance Program. What is the name of the specific provider, program and version of that Fleet Maintenance Program?
Response: See Attachment B - Requirement Matrix. PS Energy is the existing provider Fuel Data usage. See section 3.3.4 of the proposal.
B) Please list all others that apply as mentioned above.
Response: See the above response.

11. Can the County please list the make and model of the TLS system used at each site?
Response:
1) Big Creek: TLS-350 Veedor-Root
2) Central Maintenance: TLS-350 Veedor-Root
3) Charlie Brown Airport: TLS-350 Veedor-Root
4) North Service Center: TLS-350 Veedor-Root
5) South Service Center: TLS-350 Veedor-Root
6) Stonewall: TLS-350 Veedor-Root
7) Willis Mill: TLS-350 Veedor-Root
8) Fire Station Plummer RD.: TLS-300C Veedor Root

12. Since there were no county representatives from the IT department present for the site visits we were not able to question them on site specifics regarding network access. As the RFP is clear that the county desires the new system to be integrated with its current IT technology (based on the below-listed excerpts from the RFP) a rather large unknown still exists as to how, exactly, vendors are to connect to the county's IT infrastructure.

i. Section 3.3.1.4: "*Interface to Fulton County's current fleet management software/application without any disruption of service or generation of reporting.*"
ii. Section 3.3.4: "*Enable Fuel Control Terminals (FCTs) to communicate with the central computer by alternative methods, i.e. network and/or wireless communications to reduce the loss of fuel transactions from natural causes such as extended power outages or power fluctuations, store data and*

communicate with the County Fleet Management Software, improve fuel inventory ordering processing and overall control..."

iii. Section 3.3.4.2: "*...This includes equipment for the fuel islands, vehicles and other equipment, communications up to where it connects to Fulton County's IT infrastructure, and any other equipment not specifically mentioned in the Request for Proposal.*"

iv. Section 3.3.4.6: "*...existing wiring including condition, location and setup, communication modes and connectivity i.e. network or modem connections for each site.*"

A) Will the county provide us with specific details on how each location is currently served by the IT infrastructure i.e. type of connection, location in the building (scale drawing preferred) and available bandwidth? Or, alternatively...
Response: All the sites are currently using an analog line to dial into a modem, connecting to the network via a data cable is not recommended because of the distance of the cable runs(over 295ft), however, there is the possibility of using wireless to make a connection to the network.

B) Will the county provide us with a working network connection within 10' of the existing FCTs? Or, alternatively...
Response: See above response.

C) Will the county accept using the existing phone lines and "The Stick" phone line splitter- switch that lets the Veeder-Roots and Tech 21 FCTs share the same phone line serve as the primary means of connectivity and means of data retrieval with the new AFMS? Or, Alternatively...
Response: The vendor must propose a solution.

D) Will the county allow a wireless system to be utilized to connect the FCTs with the IT connection at each site?
Response: This is to be determined.

13. Given the size and scope of this project and the comparative size and financial strength of the county as compared to the typical size and financial strength of the vendors who will be quoting this project, will the county agree to advance an initial up-front deposit of an amount up to 50% of the total contract price in order to assist the vendors with the cost of special-ordering this equipment and the significant up-front labor costs of surveying and prepping each site for the installation and roll-out of the system?
Response: The County will not pay any up-front deposit. The amount and timeframes for which the vendor is paid will be based on the project plan. The County may pay equipment so that it may be ordered; however, services will be paid as they are provided.

14. With regard to the mobile lubrication trucks it appears from our inspection of them that they will both need to have new compressed air piping work done along with the addition of valves for the control of the compressed air to the air-operated-diaphragm pumps that pump the diesel fuel. In addition, they will need pulsers added to the existing diesel fuel meters which appear to be an older model that will not support a pulser. Will the county consider allowing the vendors to simply supply the equipment components needed to retrofit the trucks with a compatible system and then allowing county personnel to do the actual installation and modification of the trucks in-house?
Response: Yes. The vendor must clearly label the cost as "Optional" and separately from the cost associated with the original scope of work.

15. Do you want to use the fuel management unit at each fuel island to communicate/interface with the tank monitors directly at each site or do you want to keep it as it is with a shared telephone lines?
Response: See Attachment B – Requirements Matrix.

16. Do you want to use Ethernet/Network communication to communicate with each fuel management unit or do you want to keep the existing telephone lines or have both?
Response: All the sites are currently using an analog line to dial into a modem, connecting to the network via a data cable is not recommended because of the distance of the cable runs(over 295ft), however, there is the possibility of using wireless to make a connection to the network.

17. Do you have a preference as to the order in which your sites are to be converted?
Response: Yes

18. Do you expect the vendor to remove the old equipment?
Response: Yes. The vendor shall disconnect the old equipment and the County will be responsible for disposal.

19. What do you intend to include in the General Conditions and Special Conditions sections of the proposed agreement?
Response: The RFP document will become a part of the Contract Agreement.

20. Do you have a breakdown of vehicle makes and models for the 1500?
Response: See Attachment A
Can you note how many of those that have dual fuel tanks?
Response: This information is unavailable at this time.

21. Do you want to have a Prokee for every vehicle on the request for 1500?
Response: Yes.

22. Please confirm you only wish to have one administration pc set up for this operation of all 9 sites?
Response: Yes. That is correct.

23. Should we assume Fulton County wants to print the transactions from the data base or do you wish to have a site logger printer at each site which can print every transaction as well?
Response: Only at the main site, not all sites.

24. Will these units be connected to a backup power supply system? If so what kind and will Fulton County be making that connection?
Response: This is to be determined.

25. During the meeting yesterday, the question was asked if we could obtain a vehicle list. The reason for this is to determine the type of equipment that will be needed to capture vehicle data (mileage/hours, diagnostic, etc.). Can you tell me if we will be able to obtain this information including the year, make, and model.
Response: See Attachment A

26. A follow up question related to the other equipment (heavy equipment, mowers, gas cans, etc.) was asked to determine the means of identifying and capturing data from these. Can you also tell me if we can obtain this information? As your staff indicated, some of these will be identified using a type of memory chip key. A list of the vehicles and equipment will be helpful with this determination as well.
Response: See Attachment A

27. I am told that each of the Veeder-Root models at each of the 9 sites have an RS232 port that we would use to interface with the fuel management system. Can you verify this?
Response: Refer to question No. 11.

28. The question was asked about where the fuel management system software would be installed and how many users there would be. Can you clarify how many computers/users will be networked with the server (or virtual server) that will host the fuel management system software?
Response: One Computer and number of users to be determined.

29. Also, can you tell me how many fuel sites are networked with the server where the fuel management system software will be installed and how many fuel sites have phone line communications?

Response: All the sites are currently using an analog line to dial into a modem, connecting to the network via a data cable is not recommended because of the distance of the cable runs(over 295ft), however, there is the possibility of using wireless to make a connection to the network.

30. Can you tell me which fleet maintenance software is used by Fulton County?
Response: Archibus

31. Can you elaborate on the type of information to be included in the Excel spreadsheet that was mentioned during the discussion regarding the technical submission and the 5 copies on CD?
Response: See Attachment B - Requirements Matrix.

32. Is it the County's intent to have all vehicles, cars, trucks, lawn movers, backhoes, etc. equipped with a RF device for fueling?
Response: Fleet Maintenance intends to have at least 90% of the aforementioned devices equipped with a RF device.

33. Is it the County's intent to capture employee information on all transactions using a PIN?
Response: Yes

34. For equipment that cannot have an RF device like a gas can; does the County want the bidder to recommend a device for accessing the system or does the County have a preferred method?
Response: We prefer keys (no cards) or the vendor can recommend

35. What is the length of time the County expects the source code to be held in escrow?
Response: The County expects the source code to be held in escrow for the term of the contract.

36. Can the County supply the format for the transfer file to the fleet maintenance system?
Response: See Section 3.3.4 paragraph 7

37. Is transferring to County's historical transaction data a mandatory item?
Response: No.

38. In section 3.3.4 #2 it states "The vendor will should include all equipment needed to have a fully functional AFMS. This includes equipment for …communications up to where it connects to Fulton County's IT infrastructure." Will the County provide network access at all sites?

Response: : All the sites are currently using an analog line to dial into a modem, connecting to the network via a data cable is not recommended because of the distance of the cable runs(over 295ft), however, there is the possibility of using wireless to make a connection to the network.

39. In section 3.3.4 #5 states "The AFMS should allow should allow for each vehicle to monitored without user input or intervention." At the pre-bid meeting the County stated it wanted a manual PIN entry. Can you please clarify what is required?
Response: Yes we will require the user to enter a PIN manually

40. Please confirm that the County expects to install all vehicle equipment after training?
Response: That is correct.

41. Will the warranty period start at the completion/acceptance of each site or the complete project?
Response: The warranty period for the equipment may be based on the completion and acceptance of each site. The warranty period of the system and its integrated parts may be based on the completion of the project.

42. In section 3.4 Technical Proposal and Format and content #4 refers to a Spreadsheet that is enclosed. Can the County supply an electronic copy of the spreadsheet?
Response: See Attachment B – Requirements Matrix.

43. The Atlanta Metro Area is subject to the EPA's Vapor Recovery Regulations; Are You Requiring Vapor Recovery Nozzles be Used with the Fuel Management System?
Response: The existing nozzles are EPA approved and we plan on using the existing nozzles.

For additional information regarding this addendum contact Malcolm Tyson, Assistant Purchasing Agent at (404) 612-5811 or e-mail at malcolm.tyson@fultoncountyga.gov.

The undersigned propose acknowledges receipt of this addendum by returning one (1) copy with their bid. Failure to return a signed copy of this addendum with your bid may render your bid to be non-responsive.

Except as provided herein, all terms and conditions in the bid referenced above remain **unchanged** and in full force and effect.

Attachment B

No.	Requirements Description	Response E/M/P/O/C/X	Comments
1	Fully automated system with the ability for manual override for user defined situations, such as for filling gas cans, rental/leased vehicles and equipment		
2	The AFMS must be a complete Turnkey Installation that includes connection to the existing fuel dispenser/pumps, mobile fueling units, and to the existing fuel storage units. Additional conduit as needed is the responsibility of the Vendor. The Vendor must provide specifications for hosting the AFMS.		
3	AFMS must be upgradeable and expandable to other Fulton County sites.		
4	The AFMS must be compatible with standard fuel dispensers/pumps that utilize connectivity to an AFMS via hardware located inside the fuel dispenser/pump unit housing.		
5	Equipment information collected from the AFMS shall include at a minimum: A. Vehicle UNIT number: B. County ID Number C. Vehicle Make: D. Vehicle Model: E. Vehicle Model Year: F. Vehicle Odometer reading: G. Gallons dispensed: H. Mileage accumulated since last fueling: I. Fuel Type J. Employee Name: K. Date and Time (time should be in EST and in a standard non-military format): L. Location		

No.	Requirements Description	Response E/M/P/O/C/X	Comments
6	The record for each transaction shall include at a minimum the information described in item 1.6 above. This information is available for standard and ad-hoc reporting.		
7	The Fuel Transaction report is a journal of all fuel transactions (including County Fuel, Credit Cards and outside retailers) grouped by General Ledger Group and sorted by Unit Number: The report layout includes the following data: A. Period ending date B. Record count C. Fund (General/Ledger) D. Quantity of product dispensed (line item and report summarization) E. Cost of product dispensed (line item and report summarization)		
8	The Organization/General Ledger Report is a summarization of the transactions (of 1.8 above) by Organization and General Ledger Groups and shall ultimately be provided to the County's Finance Department (reporting of purchases by Fund, Unit, and Detail by Unit). The report is used by Finance to allocate fuel charges to the various Organization and General Ledger Groups. The report will show total fuel charges for each Group: A. Period ending date B. Department name C. Fund (General/Ledger) D. Department E. General ledger code F. Quantity of product dispensed (line item and report summarization) G. Cost of product dispensed (line item and report summarization)		

No.	Requirements Description	Response E/M/P/O/C/X	Comments
9	A report is generated that provides the vehicle odometer reading and fuel usage for all vehicles covered under this document. This data is used for updates to the vehicle maintenance files located in the ELKE Fleet Management System which resides on an IBM AS/400 mid-frame computer at the present time: The report layout includes the following data: A. Period ending date B. Card# C. Driver Name D. Co ID E. Unit# F. Fund (General/Ledger) G. Department H. Unit I. Site J. Date of Transaction K. Time L. Odometer Reading M. Product dispensed N. Quantity of product dispensed (line item and report summarization) O. Cost of product dispensed (line item and report summarization)		
10	The software must have user defined/configured parameters for ad-hoc reporting and must include examples of reports that can be created and sorted by user defined parameters		
11	The Vendor must provide layouts of all available standard reports		
12	AFMS must be able to perform daily electronic polling of Fulton County fuel sites to collect prescribed fueling data related to each fueling transaction and to collect fuel inventory levels for each storage unit at each location.		

No.	Requirements Description	Response E/M/P/O/C/X	Comments
13	AFMS must be capable of allowing uploads and conversion to the system of credit card transaction data.		
14	AFMS must be able to collect prescribed retail fueling data (data is described in 1.11 above) related to each transaction for fuel purchased at retail outlets.		
15	AFMS must be able to capture and download data from the latest model vehicles and equipment.		
16	AFMS must be able to connect to and download information from a standard OBD-II diagnostics tool utilizing a standard 2 X 8 J1962 connector and SAE Standard J/1979 codes.		
17	The AFMS must be able to download information utilizing the standard ten (10) modes of operation, described in the latest OBD-II SAE J/1979, which provide various vehicle information including the following information: A. Engine coolant temperature B. Fuel pressure C. Oil pressure D. Engine RPM E. Intake manifold absolute pressure F. Timing advance G. Oxygen sensor and oxygen sensor heater readings H. A/C refrigerant readings I. Exhaust Gas Recirculation (EGR) system readings		
18	On Board Computer Diagnostics data must be accessible and capable of being stored in the AFMS database.		
19	AFMS must process information for the following fuels: A. Unleaded Gasoline: B. Ultra-Low Sulfur Diesel: C. Compressed Natural Gas (CNG)		
20	AFMS must be accessible via the internet for extraction and/or collection of data, statistics, and reports.		

No.	Requirements Description	Response E/M/P/O/C/X	Comments
21	Awarded vendor to have installation experience within the last two years with other companies or government entities that have a minimum fleet size of at least 1500 vehicles. References are required.		
22	Awarded vendor must have technicians (with at a minimum one year of experience) on site to provide expertise and/or assistance during installation and initial start-up.		
23	The vendor must make mandatory site visits to all eight fueling sites prior to submission of any Request for Proposal.		
24	AFMS software must allow concurrent logins at all pumps and dispensers at all sites.		
25	AFMS must allow for immediate termination of the transaction upon removal of the nozzle after fueling.		
26	The AFMS must issue warnings based on odometer readings (up to three warnings prior to the vehicle surpassing a set mileage maximum) and then deactivate the system to prevent further fueling until the vehicle is brought in for preventative maintenance.		
27	The AFMS must have capabilities to receive software patches and updates as these become available from the vendor. The AFMS must be compatible with Flash Technology for upgrades to memory and to components including the vehicle interface unit.		
28	After the initial training for installation of vehicle monitoring units, Fulton County personnel must be allowed to conduct installation for vehicles and equipment.		
29	The AFMS must prevent incorrect fuel from being dispensed into a vehicle.		
30	The AFMS must prevent product flow in the event of a malfunction. Provision must be made for a wire seal to be added in order to ensure it is tamper-proof.		

No.	Requirements Description	Response E/M/P/O/C/X	Comments
38	Preventative Maintenance Monitoring and Scheduling shall include automatic notification via email when values exceed user-defined limits.		
39	AFMS must be compatible with the Network Fleet GPS system.		
31	AFMS Controllers must communicate with the Key Readers located on or connected to the Dispensers (including Mobile Fueling Units).		
32	AFMS must be compatible with standard Credit Cards utilized during the purchase of fuel.		
33	AFMS must be compatible with standard Credit Cards utilized during the purchase of fuel.		
34	AFMS compatible with the Veeder-Root Tank Monitoring System (Model 350) and automatic tank gauge measurement hardware to allow for the following readings and reporting per fuel storage tank. Vendor is responsible for installation of a RS-232 Interface Card to the Veeder-Root site monitor (each site) to enable interface to the AFMS for uploads of the following data: A. Volume of fuel in gallons B. Total Capacity Volume of fuel in gallons C. Allege in gallons D. Height in inches of fuel E. Height in inches of water F. Volume of water in gallons G. Percentage of water in fuel storage tank H. Temperature at time of reading I. Percentage of fuel level per capacity in gallons J. Leakage detection		
35	Volume of fuel in gallons at start and finish times of test.		
36	Usage in gallons at start and finish times of test.		

No.	Requirements Description	Response E/M/P/O/C/X	Comments
37	Total Capacity Volume of fuel in gallons at start and finish times of test.		
38	Height in inches of fuel at start and finish times of test.		
39	Water volume at start and finish times of test.		
40	Temperature at start and finish times of test.		
41	Leakage results: A. Test start date/time B. Test length in hours C. Starting volume of fuel D. Leak test results in gallons per hour: E. Leak test pass or fail		
42	AFMS must track fuel dispensed to the nearest 1/10 gallons.		
43	After retirement of vehicles and/or equipment, the vehicle monitoring device must be transferable and reprogrammable for the new vehicle and/or equipment.		
44	AFMS must provide for messaging that can be displayed on the fuel dispenser/pump. These messages can be used to notify users or preventative maintenance reminders and general safety messages.		
45	In those cases where keys are to be provided, such as for non-automated fueling, the keys must be able to be encoded with confidential information and provide the capability to record transaction data. The encoding software is provided by the vendor.		
46	The Vendor must assure appropriate bandwidth per site for optimal network performance of communications between automated fuel management system components including, but not limited to, fuel terminal or controller and the central automated fuel management system computer/server.		

No.	Requirements Description	Response E/M/P/O/C/X	Comments
47	Vendor should indicate whether their AFMS system can be installed and supported on a virtualized server (VMWare ESX) installation. If the proposed AFMS system is not capable of running on a VMWare platform, then vendor must propose all central system hardware and software, including licensing, necessary to run and support the AFMS system as optimally configured
