

Fulton County Green Team bio

The Fulton County Green Team was created in 2007 to explore and recommend ways that Fulton County Government can address environmental concerns in daily operations and in service delivery. Green Team members represent a diverse group of operations within Fulton County Government, including information technology, facility maintenance, housing & human services, planning and development, cooperative extension, environmental health, libraries, and communications, among others. During this presentation, members will discuss cost effective sustainability measures, including strategies for paper reduction, reduced water and electrical consumption, recycling, sustainable landscaping, and more. These replicable means can be used by any organization seeking to go green.
