

# RAT - PROOFING YOUR HOME

To keep rats out of your house, you should:

- Keep all windows screened. Repair any broken screens. Any openings or vents to the crawl space should be securely screened.
- Rats can enter through holes that are only 3/8" wide so you should seal all openings that are 3/8" or wider. Holes around pipes can be sealed with metal collars or caulk or cement.
- Don't leave doors open and repair any broken doors.
- All vents in the roof and under eaves should be screened to prevent rats from entering your home.
- Repair any holes in the foundation of your house. Also, repair any damaged or rotted wood.
