General Contractor: Archer Western Contractors, Atlanta

Engineers: Long Engineering, Atlanta; Brown & Caldwell,
Atlanta

The \$138-million Johns Creek Environmental Campus, the largest membrane bioreactor plant in the U.S., treats up to 15 million gal per day of wastewater. But what sets the plant apart besides its amenities is the design, giving it the look of a traditional mill. The site includes a shared-use public park and trail system as well as an educational facility aimed at teaching children about the impact of water quality on the environment. Said one judge, "It's a wonderful result and will have an important contribution to the environment."
