What is AI Art?

ELI5: Artificial Intelligence-based artwork (or AI Art) is created when a computer program generates images or videos based on patterns it learned from a bunch of data.

How: A person trains a computer program, known as an AI model, to recognize patterns in images by providing it with a lot of examples, like pictures of various objects, scenes, or even other artworks. The AI model learns from this data to understand different shapes, colors, and textures. Over time, with enough training, the AI gets better at creating new images. If it's shown many images of red cups, it can generate a new image of a red cup even if it's in a style or angle it hasn't seen before.

Ethics in AI and AI Art

- AI might get the answer wrong, misunderstand what you want, or lack an understanding of your lived experience.
- Training Data: Some AI companies train their model on copyrighted artworks. Some chose to only train on licensed sources.
- Academic Honesty: If you use ChatGPT, or AI Art tools like Bing or Firefly. Just be honest about it!
