

Fulton County Board of Health Epidemiology Report

COVID-19 Cases - 10/15/2021

SUMMARY

- As of October 15, 2021, Fulton County has recorded 109,921 confirmed cases and 20,647 probable cases of COVID-19.
- Figure 1 shows both confirmed and probable case counts but the ensuing tables and figures use data from **confirmed** cases only.
- As of October 15, 2021, Fulton County has recorded **1,577 confirmed COVID-19 deaths.** 161 deaths are currently under review by GA DPH to confirm cause of death.
- By city, new confirmed COVID-19 case rates range from 125.7 per 100,000 persons (Milton) to 314.9 per 100,000 persons (Union City). [Fulton County Diagnoses Rates (per 100,000 persons): Cumulative –10000.3; Incidence 184.0]. See map showing incident case rate by ZIP code on Pg.7.
- Of all PCR testing done in Fulton County between Sept. 27 and Oct. 10, the percent positivity rate was 5.2%.

Counts shown reflect the number of cases as of 9:00 am on 10/15/21 using the date of first positive sample collection. Where date of sample collection was not available or missing, the date of report creation in GA SendSS was used instead. The Georgia Department of Health defines a confirmed cases as someone with a positive molecular test, also known as PCR. A probable case is defined as a positive antigen test, though probable cases are still considered positive cases and individuals who tested positive through an antigen test should follow all DPH isolation and quarantine guidance. Note: Delays in data reporting may cause changes in data counts, particularly in the shaded portion. Data throughout this report are preliminary and subject to ongoing data cleaning processes, and thus are subject to change.

THE FOLLOWING ANALYSES (PAGES 1-19) ARE USING DATA ON CONFIRMED CASES ONLY.

DISTRIBUTION OF COVID-19 CASES BY REGION

New cases: 48% of the new COVID-19 cases in the past 2 weeks occurred in Atlanta while 26% and 24% occurred in the Northern and Southern regions of the county respectively.

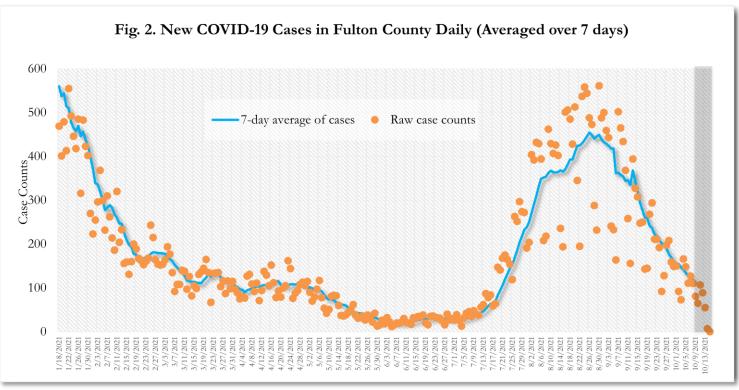

Fulton Region	% Cumulative	% New	
	count	cases*	
Atlanta	43.5%	48.0%	
North ¹	31.7%	25.8%	
South ²	21.9%	23.8%	
Unincorporated/Unknown	2.9%	2.4%	

¹Includes all Fulton County cities north of Atlanta (Alpharetta, Johns Creek, Milton, Mountain Park, Roswell, Sandy Springs,) | ²Includes all cities south of Atlanta (Chattahoochee Hills, College Park, East Point, Fairburn, Hapeville, Palmetto, South Fulton, and Union City) *New cases: Cases diagnosed in the past 2 weeks only (between 9/25/21 – 10/8/21).

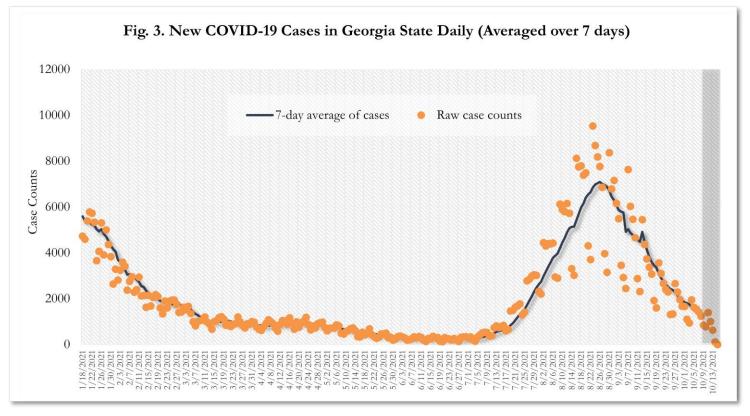

In the recent two week reporting period (9/25-10/8), there were fewer new cases of COVID-19 in Fulton County than the previous two weeks (9/11-9/24).

*Delayed a week to account for testing results turnaround time.

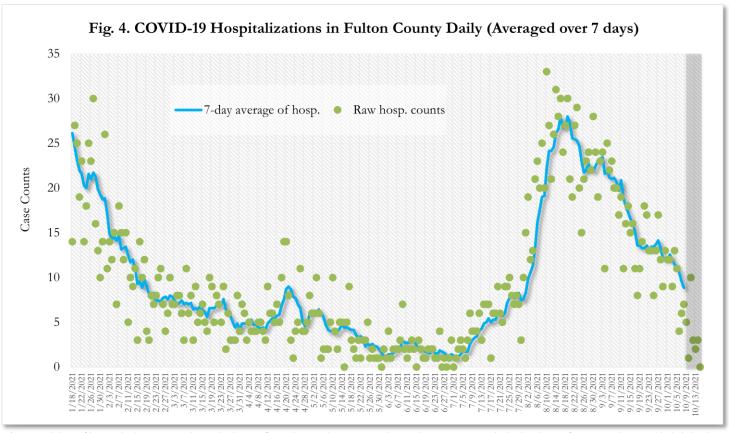

TRENDS IN COVID-19 CASES, HOSPITALIZATIONS AND DEATHS (7-DAY MOVING AVE.)

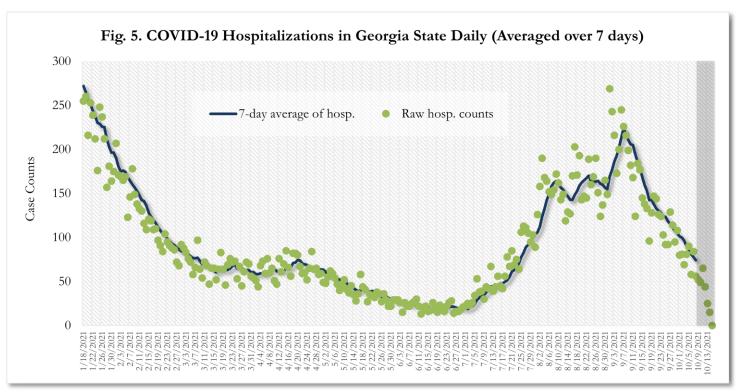

*Date of collection of first positive sample used (report creation date used where sample collection date is missing). Graph above reflects the trend in COVID-19 diagnosis. Due to the high volume of testing in recent weeks, there have been delays in reporting lab results. Thus, the trend is subject to change as more lab results get added to the state surveillance database.

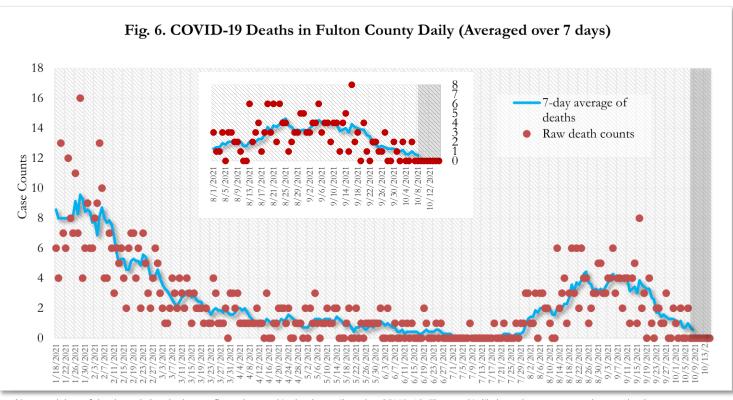

^{*}Date of collection of first positive sample used (report creation date used where sample collection date is missing). Graph above reflects the trend in COVID-19 diagnosis. Due to the high volume of testing in recent weeks, there have been delays in reporting lab results. Thus, the trend is subject to change as more lab results get added to the state surveillance database.

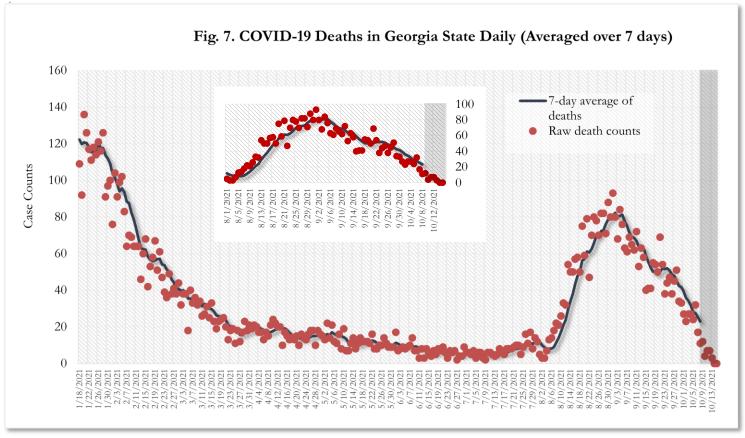

^{*}Reported date of hospital admission used. Graph above reflects the trend in COVID-19 hospitalizations. Due to the high volume of new cases being added daily, there have been delays in reporting hospitalization data. Thus, the trend is likely to change as more hospitalization data is reported in the state surveillance database. Numbers may include those who tested positive for Covid-19 while hospitalized for a different reason.

^{*}Reported date of hospital admission used. Graph above reflects the trend in COVID-19 hospitalizations. Due to the high volume of new cases being added daily, there have been delays in reporting hospitalization data. Thus, the trend is likely to change as more hospitalization data is reported in the state surveillance database. Numbers may include those who tested positive for Covid-19 while hospitalized for a different reason.

^{*}Reported date of death used. Graph above reflects the trend in deaths attributed to COVID-19. The trend is likely to change as more data on deaths among persons with COVID-19 is reported in the state surveillance database.

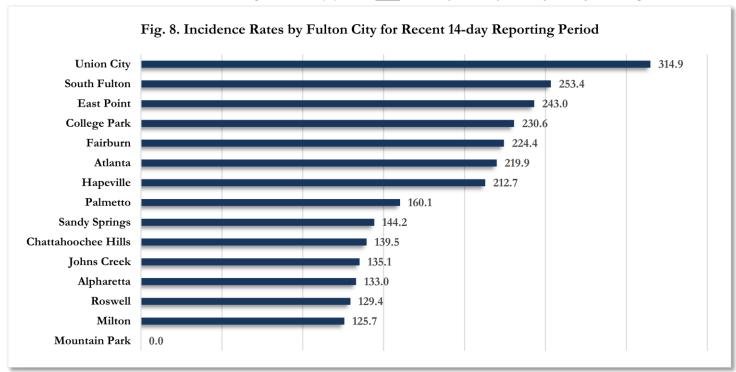

^{*}Reported date of death used. Graph above reflects the trend in deaths attributed to COVID-19. The trend is likely to change as more data on deaths among persons with COVID-19 is reported in the state surveillance database.

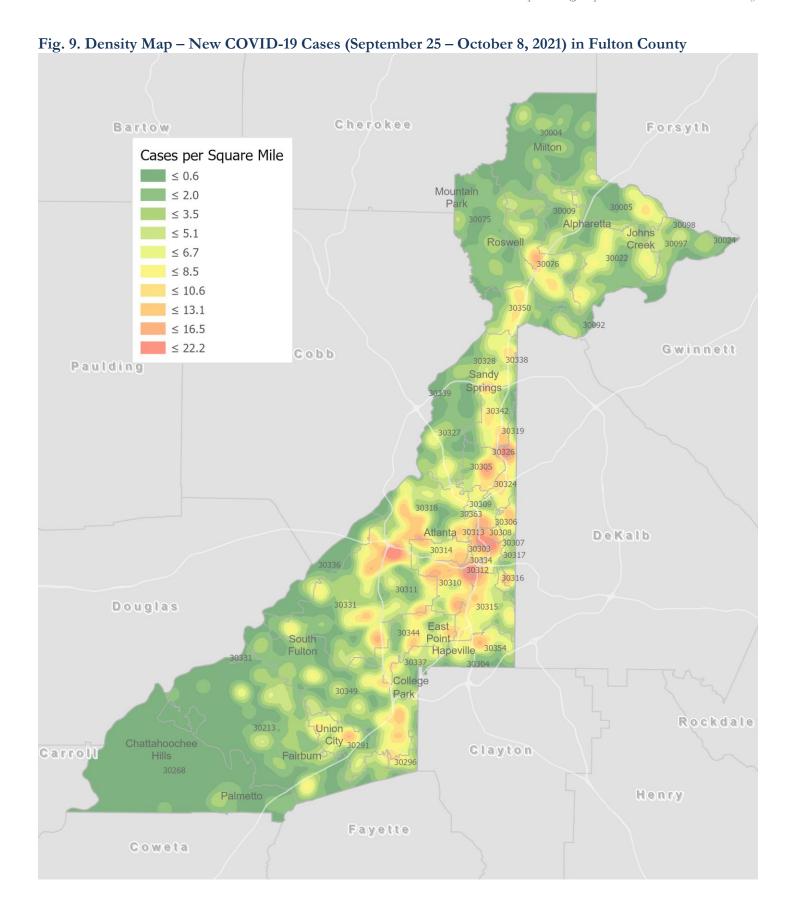

COVID-19 CASE COUNTS AND RATES BY CITY

	Recent 14-day reporting period ¹	Preceding 14-day reporting period	% Change from preceding 14 days (%) ²	14-Day Incidence Rate ³	
	9/25-10/8	9/11-9/24			
Alpharetta	86	140	↓ 38.6%	133.0	
Atlanta	970	1483	↓ 34.6%	219.9	
Chattahoochee Hills	<10	<10	-	139.5	
College Park	32	35	↓ 8.6%	230.6	
East Point	85	117	↓ 27.4%	243.0	
Fairburn	33	59	↓ 44.1%	224.4	
Hapeville	14	13	↑ 7.7%	212.7	
Johns Creek	113	133	↓ 15.0%	135.1	
Milton	48	106	↓ 54.7%	125.7	
Mountain Park	0	<10	-	0.0	
Palmetto	<10	15	↓ 53.3%	160.1	
Roswell	122	197	↓ 38.1%	129.4	
Sandy Springs	152	219	↓ 30.6%	144.2	
South Fulton	241	396	↓ 39.1%	253.4	
Union City	66	99	↓ 33.3%	314.9	
Unknown	49	50	-	-	

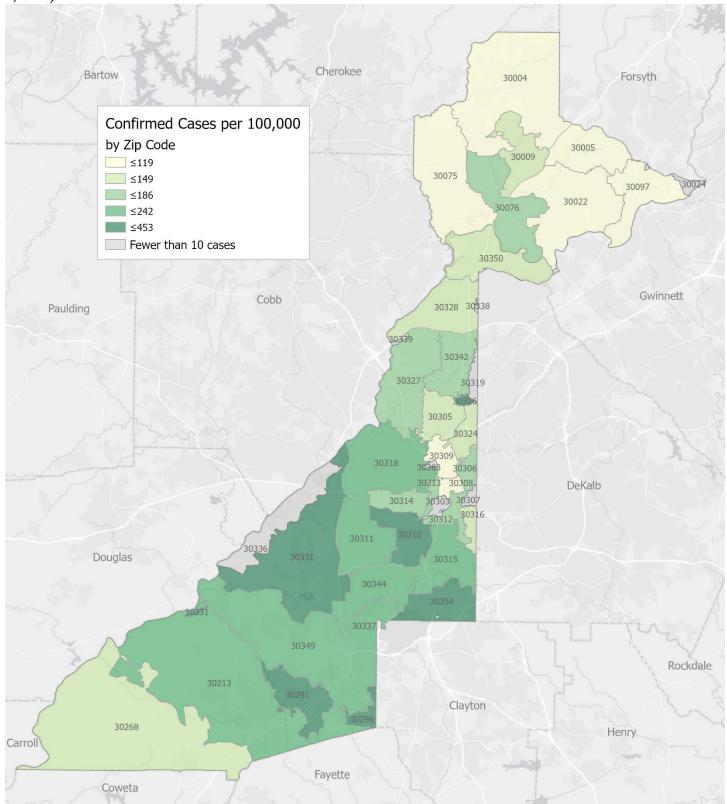

*New cases: Cases diagnosed in most recent 14 days (based on reported dates of positive sample collection). To allow for lag in reporting results of new diagnoses from samples collected in the most recent week, data used for incident diagnoses analyses were moved back by one week. *% change: These reflect the percentage increase or decrease in new diagnoses between the 14 days preceding the most recent 7 days and the 14 days preceding that. *3(Incidence) Rate: Rate of new diagnoses in the last 14 day period preceding the immediate past week. **Data cleaning (either during case interviews or address geo-coding) may lead to reassignment of few cases from one territory to another based on their corrected addresses. These may appear as "decreases" when compared to the previous counts. These do not reflect errors in the data collection or analysis process but only reflect the minor day-to-day fluctuations in case counts that arise in an evolving public health database like COVID's. *Incidence rate is skewed high due to small population. *Note: All data reported are preliminary and subject to change.*

^{*}Rates shown are per 100,000 persons | All data shown are preliminary and are subject to change as testing results get updated.

^{*}Rates shown are per 100,000 populations.

New COVID-19 cases: Cases diagnosed in most recent 14 days (based on reported dates of positive sample collection). To allow for lag in reporting results of positive cases from samples collected in the immediate past7 days, data used for incident diagnoses analyses are moved back by one week. Data used excludes outbreak-related cases at long-term care facilities and map shown reflects only the new non-LTCF cases diagnosed between the dates shown in map title. See page 8 for zip code break down table.

*New cases: Cases diagnosed in most recent 28 days (based on reported dates of positive sample collection). To allow for lag in reporting results of new diagnoses from samples collected in the most recent week, data used for incident diagnoses analyses were moved back by one week. *Percent change: These reflect the percentage increase or decrease of new diagnoses between the 14 days preceding the past 7 days and the 14 days preceding that. Changes in ZIP codes with less than 10 cases in both 2 week intervals are not reported.

COVID-19 HOSPITALIZATIONS, ICU ADMISSIONS AND DEATHS IN FULTON

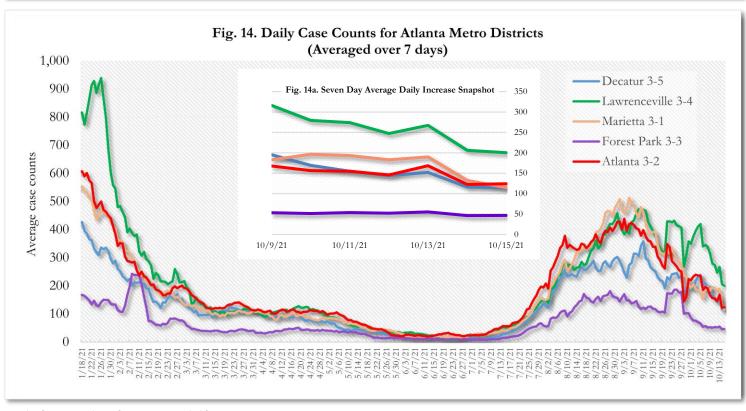

Values for August and September 2021 in figures 13 and 14 are subject to change as more hospitalizations, ICU admissions, and deaths get reported to state and local entities.

COVID-19 CASE TRENDS IN FULTON AND SURROUNDING DISTRICTS

This figure uses date of report as provided from DPH.

DEMOGRAPHIC DISTRIBUTIONS – COVID-19 CASES AND DEATHS

Table A - Cumulative and recent confirmed Covid-19 case and death counts by gender, age, and race/ethnicity in Fulton County, Georgia. Past 28 day period refers to September 11 – October 8, 2021

	Total Confirmed Cases	% of Total Cases	Confirmed Cases past 28 days	% of Confirmed Cases past 28 days	Total Confirmed Deaths	% of Total Deaths	Confirmed Deaths past 28 days	% of Confirmed Deaths past 28 days

Unknown*	7420	6.8%	649	12.7%	0	-	0	-

^{*}Unknown includes cases not yet interviewed. 28 days delayed by seven to account for lag in reporting lab results. Deaths refer to all persons who had a positive PCR test result for Covid-19 and there is evidence that Covid-19 was the cause of death or a significant contributor to their death.

The following data are updated every two weeks.

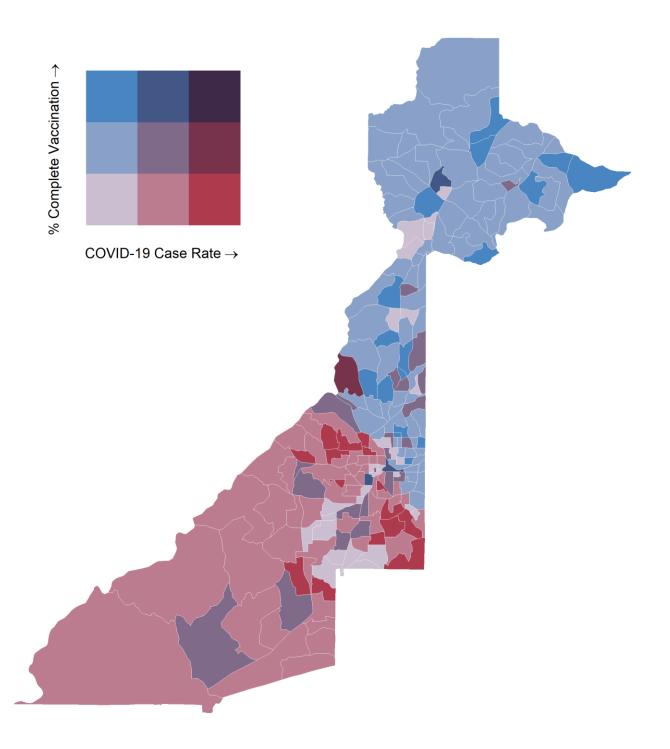

Last updated 10/12/2021

Data are from confirmed cases and PCR testing only.

These data are generated using a fixed start date and counted forward in 14-day intervals. Using these time blocks allows for the stability in trends over time and accounts for delays in reporting lab results.

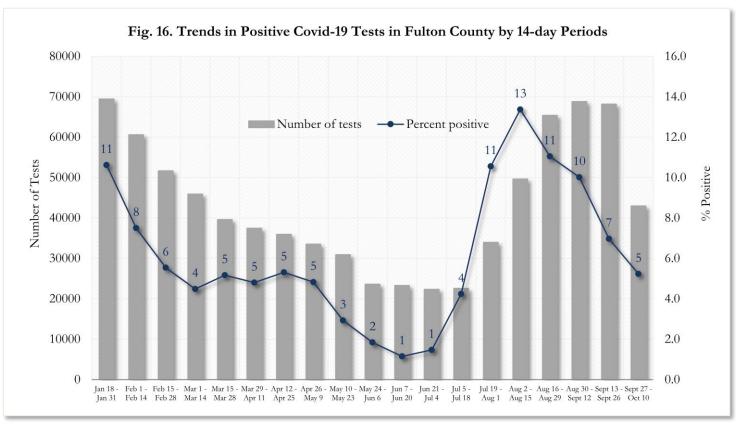

Please visit the Georgia Department of Public Health Daily Status Report here for cumulative daily counts.

Fig. 15. Percent Complete Vaccination and COVID-19 Case Rate (per 100,000 population) by Census Tract September 13 – October 10, 2021

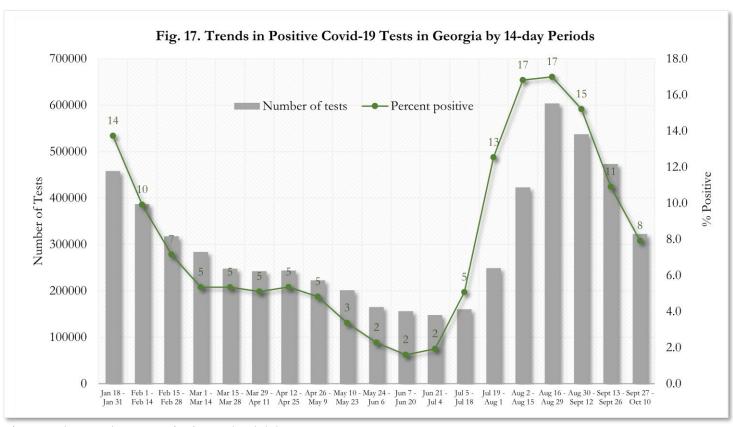

<u>How to interpret these colors:</u> The darker the blue, the better. The upper most blue box indicates low COVID-19 case rates and high vaccination coverage. Red is not ideal as red indicates high COVID-19 case rates and low vaccination coverage. Colors in between indicate varying combinations of COVID-19 case rates and vaccination coverage. COVID-19 case rate reflects new COVID-19 cases diagnosed between September 13 and October 10, 2021 across Fulton County. Vaccination data from: https://experience.arcgis.com/experience/3d8eea39f5c1443db1743a4cb8948a9c

COVID-19 TESTING AND POSITIVITY IN FULTON COUNTY AND GEORGIA

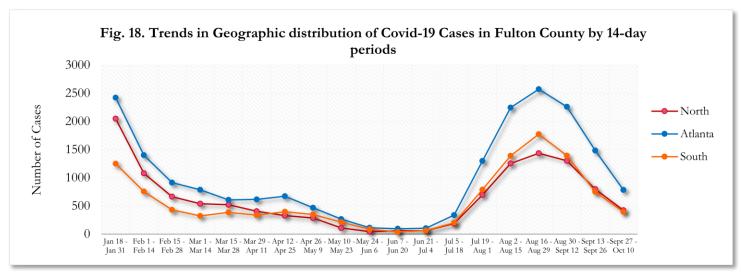

*Data on Polymerase Chain Reaction (PCR) tests only included.

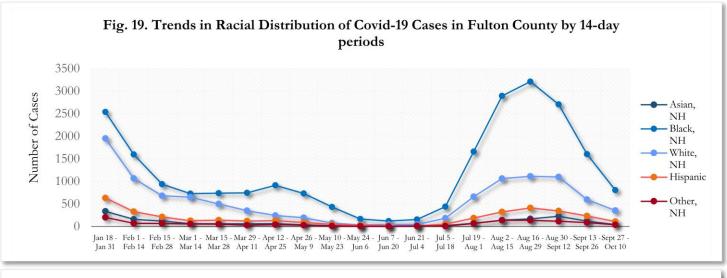

^{*}Data on Polymerase Chain Reaction (PCR) tests only included.

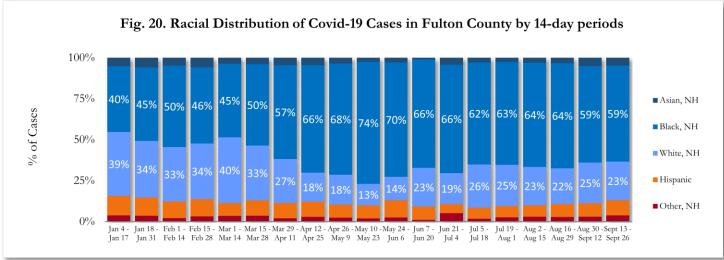

TRENDS IN COVID-19 CASES AMONG DEMOGRAPHIC GROUPS (14 DAY PERIODS)

In the past two weeks, Atlanta accounted for the majority of new cases.

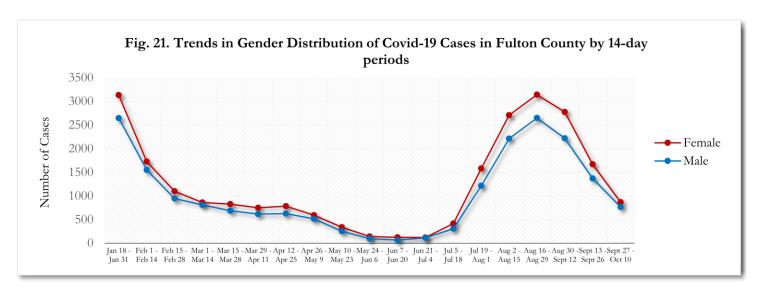

^{*}South - Includes all Fulton cities south of Atlanta (Chattahoochee Hills, College Park, East Point, Fairburn, Hapeville, Palmetto, South Fulton, and Union City)

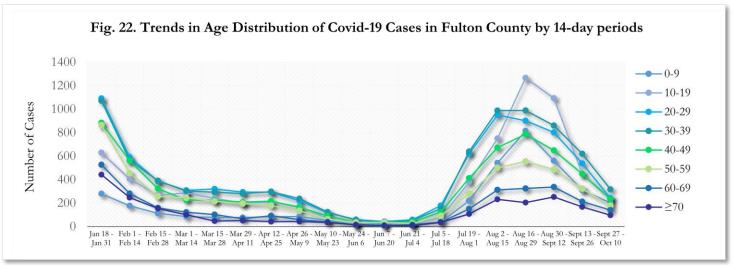

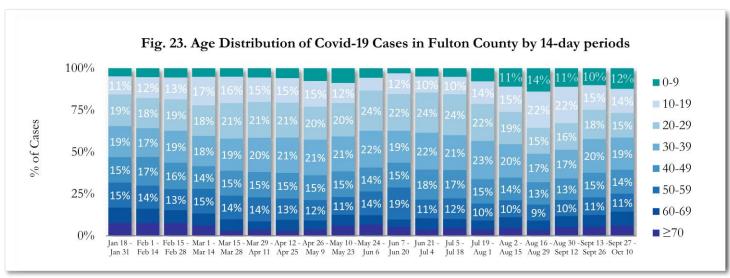

About 7% of all Fulton County COVID cases are missing data on patient race and ethnicity and in the past two weeks, about 18% of cases are missing this data. Percentages do not include the missing data and thus are subject to change as data are cleaned.

^{*}North -Includes all Fulton cities north of Atlanta (Alpharetta, Johns Creek, Milton, Mountain Park, Roswell, Sandy Springs)

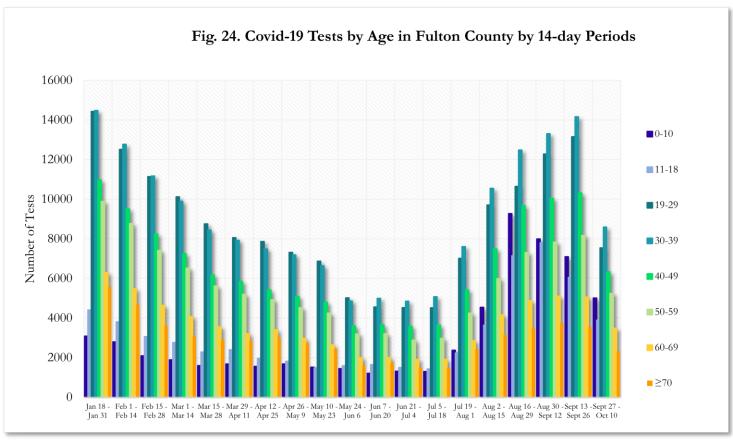

In the most recent two weeks, 20-29 year olds and 30-39 year olds accounted for the majority of new cases.

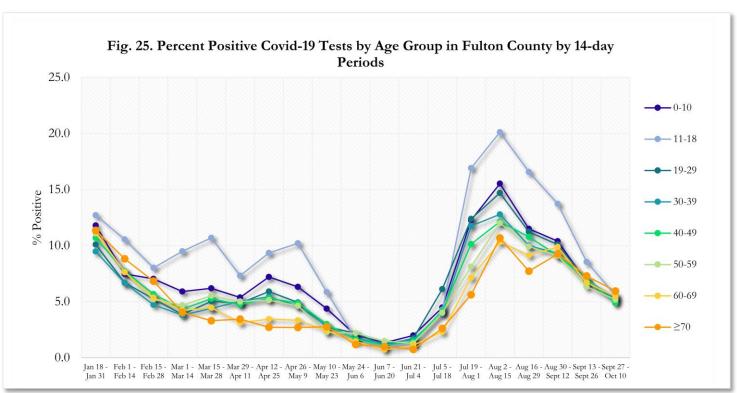

Value labels under 10% are not shown. Percentages do not include the missing data and thus are subject to change as data are cleaned.

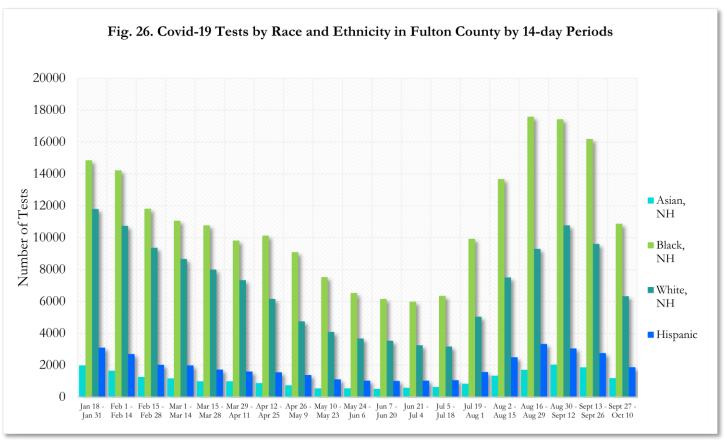

COVID-19 TESTING AND POSITIVITY IN FULTON COUNTY BY AGE AND RACE

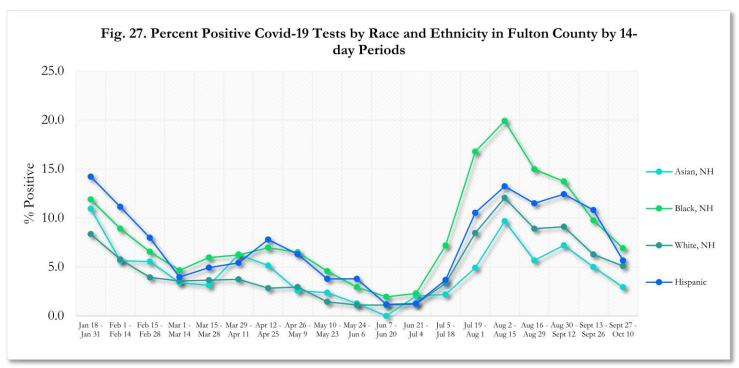

^{*}Data on Polymerase Chain Reaction (PCR) tests only included.

^{*}Data on Polymerase Chain Reaction (PCR) tests only included.

^{*}Data on Polymerase Chain Reaction (PCR) tests only included. For the recent two weeks, 51% of test results did not have race/ethnicity information.

^{*}Data on Polymerase Chain Reaction (PCR) tests only included.
