No appointments necessary

CLINIC HOURS
8:30AM - 5:00PM
MONDAY - FRIDAY

COVID-19 VACCINE FACTS

Covid-19 vaccine is safe for children
Before recommending COVID-19 vaccination for children, scientists conducted clinical trials. Then, the U.S. Food and Drug Administration (FDA) determined COVID-19 vaccines are safe and effective for everyone 6 months and older.

Children get a smaller dose of the vaccine
Dosage is dependent upon child's age, not weight or height.

Children who have already gotten Covid-19 should still get vaccinated
Emerging evidence indicates that people can get added protection by getting vaccinated after they have been infected with the virus that causes COVID-19.

Like adults who get vaccinated, children might experience mild side-effects
Reported side effects are mild, temporary and like those experienced after routine vaccines.
