Conserving our Water Resources

The Fulton County Department of Public Works would like to thank each student who participated in our annual Art Calendar Contest. In 2017, Fulton County and the Metro Atlanta area spent 8 months of the calendar year in a Level 2 drought response. This drought level response was put in place because of lower than average amounts of rainfall in our region as well as unseasonably warm temperatures leading into the summer season. The importance of conserving precious water resources is clear during times of drought; however, we should always make water conservation an essential part of our daily practices. Having a proactive approach to fixing leaks in homes and businesses, turning off faucets during routine daily tasks, watering our lawns during cooler times of the day, and properly disposing of fats, oils, and greases (FOG) are some small changes that produce big impacts. Changes such as these will also help protect our natural resources and the Chattahoochee River ecosystem by not using more water than we actually need. We hope the artwork in this calendar, created by our own Fulton County students, will serve as your inspiration to conserve water throughout this coming year and for years to come.

Clean Water is a Team Effort

Though we all use water every day and could not survive very long without it, we often take for granted the clean, safe water that flows from our taps – not to mention the luxury of flushing a toilet and not having to worry about what happens afterward. While we're going about our busy days, we rarely stop to think about the fact that our whole lives depend on the availability of safe water in our community and the men and women who help provide it.

From treatment plant operators to laboratory technicians, system maintenance crews to customer service representatives, and all of those in between, it takes a lot of hard work to keep our systems up and running. Each day this dedicated team provides high quality, safe drinking water to our customers and efficient, environmentally sound wastewater treatment, allowing us to return clean water to its source. Let's all try to remember and be thankful for them the next time we turn on the tap.

If you would like to learn more about water and wastewater treatment, conservation, pollution prevention, or water industry careers the Public Education and Outreach group offers a variety of educational opportunities. We offer programs for schools, summer camps, and libraries. We can coordinate tours of our treatment facilities and can provide volunteer opportunities by helping to facilitate community cleanups or training your group for Adopt-a-Stream water quality monitoring. We are also available to present to neighborhood groups or civic organizations. To learn more or to schedule a program, please contact us at (404) 612-7400 or visit <http://www.fultoncountyga.gov/fcwr-home>.
